

CARDSHARE

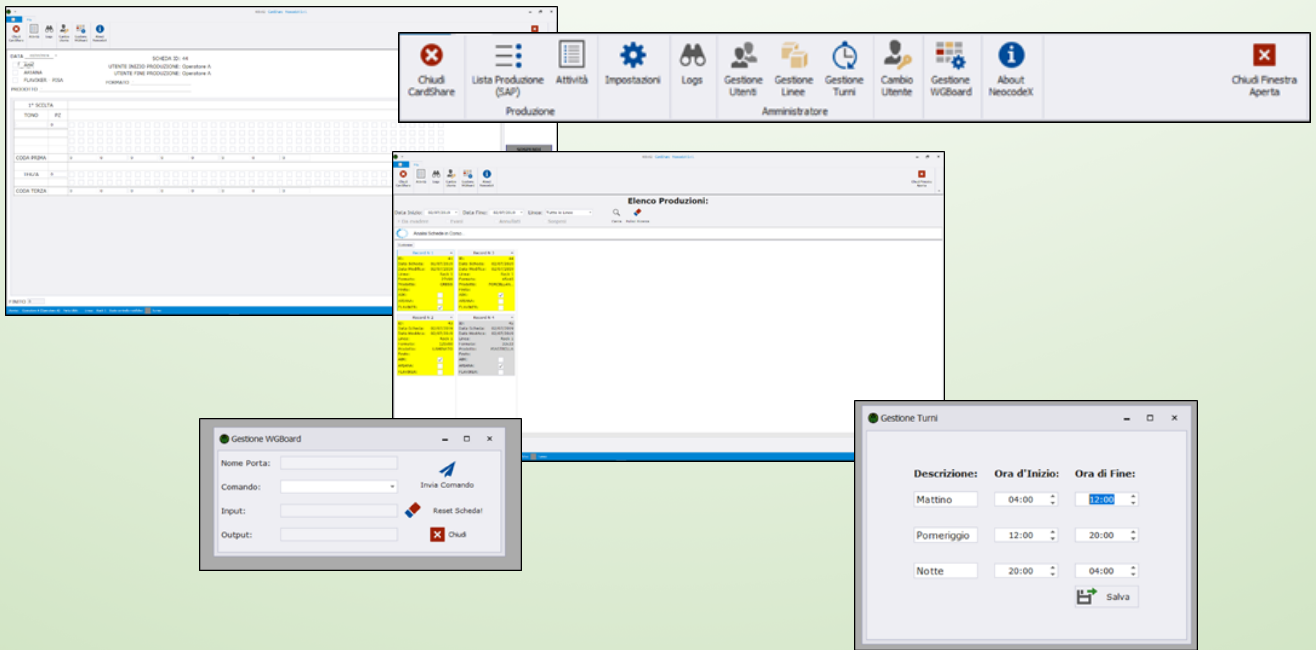

CardShare was born with the aim of fulfilling two very important tasks within the company departments:

- Reduce the transcription errors of the production data in the compilation of the progress documents
- Significantly reduce paper consumption by converting the document into CardShare into a completely editable and customizable form

The screenshot displays the CardShare software interface. At the top, it shows the date 'DATA 12/07/2023' and 'SCHEDA ID: 53'. Below this, there are checkboxes for 'ABK', 'ARJANA', and 'FLAVIKER - PISA'. The 'UTENTE INIZIO PRODUZIONE' and 'UTENTE FINE PRODUZIONE' are both set to 'Operatore A'. The 'FORMATO' field is empty. The 'PRODOTTI' field is also empty. The main part of the form is divided into two sections, each starting with '1° SCELTA'. The first section has 'TONO' set to '200' and 'PZ' set to '20'. It contains a grid of checkboxes for data entry, with the first row having the first three columns checked. Below the grid are fields for 'CODA PRIMA', 'TERZA', and 'CODA TERZA', each with a value of '0'. The second section has 'TONO' set to '2' and 'PZ' set to '0'. It also contains a grid of checkboxes and fields for 'CODA PRIMA', 'TERZA', and 'CODA TERZA', all with values of '0'. On the right side of the form, there are three buttons: 'APPROVA' (green), 'ANNULLA' (red), and 'INDIETRO' (blue).

It is possible to follow the various phases of compilation and approval of the document by the operators and area managers

Documents constantly viewable

CardShare has a high level of customization:

- Management of users, shifts and production lines
- Setting user specialization
- Possibility of personalization with notification device to signal the presence of documents to be viewed
- Production search function
- Specific function customization based on the production context and the different needs of the departments
