

WorkGest®

WorkGest is a web-based software for monitoring and tracking industrial production processes

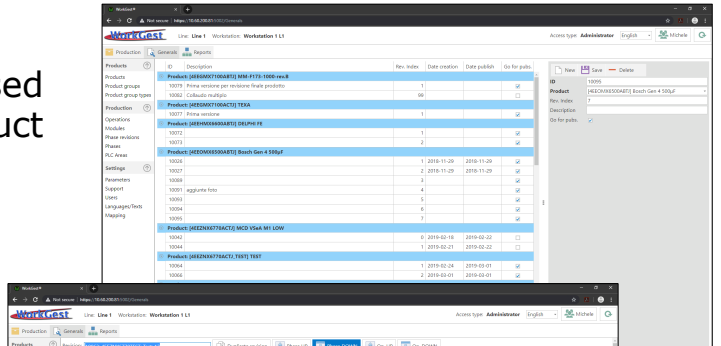

It allows flexibility and scalability in the management of production recipes that can be used over time

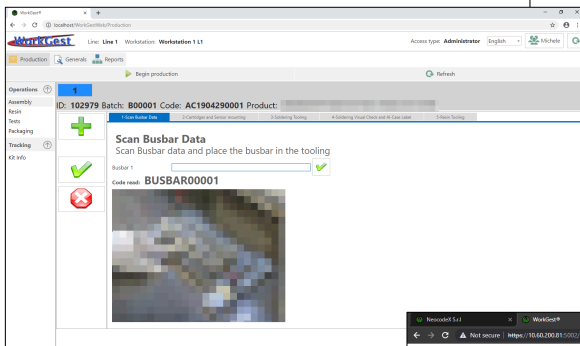

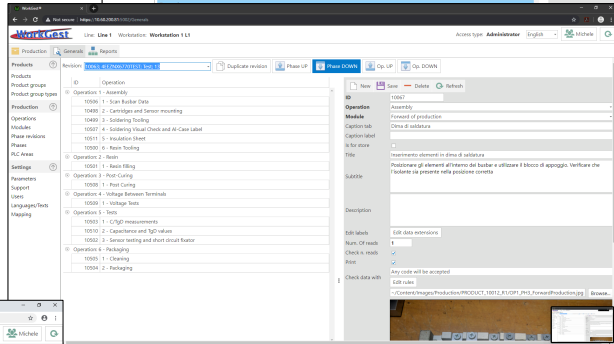

The revised recipes consist of steps that guide the operator throughout the production process

- Configurable data-tracking from application
- Customizable production progress constraints
- Interfacing with PLC and field devices

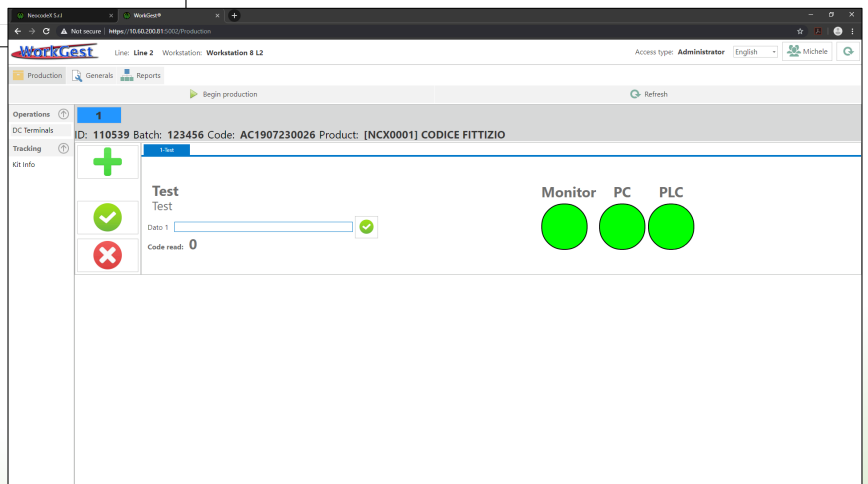

Management of revised recipes for each product

Customization of production steps (phases)

Management of active productions via web interface

Real-time data acquisition from field devices
